

**STRETCH  
WRAP  
SYSTEMS**

# Wrap oversized loads safely & quickly!

**PA manufacturer upgraded to a Wulftec Rotary Arm  
for loads 90" x 56" x 104"**

Wrap Height and Diameter dimensions are available on the WRT-200 Stretch Wrapper. 90" wide by 56" long loads are too large and unstable to be spun on a turntable. Our 30" carriages get to the top of the 104" height faster, while providing better containment for unstable, column stacked boxes. Fencing and photo eyes protect the wrap zone from intrusion during the wrap cycle. The operator drops off a load and uses a pull cord to start the wrapper, then goes to pick up the next load. Banding film is available to improve containment further. Trust Stretch Wrap Systems to get you the best machine with the right options!

Banding film means no more film breaks! The reinforced laminated banding film eliminates corner boards and strapping. Provides outstanding containment including the middle of the pallet where "Force-To-Load" is typically weak. Partially unwrapped pallets retain containment force. Tie your loads to the pallet. This is an excellent solution for beverages, pails, bags, uneven loads, bricks and blocks, high puncture hazard loads, and other difficult-to-wrap products.
